rum, plus ſumma eorundem terminorum, plus ſumma quadratorum ab iiſdem, &c.

Sin minimus terminus ponatur $= 1$, manentibus cæteris ut ſupra; evadit ſumma ratiuncularum $= 3i - 6ii + 14i^3 - 36i^4$, &c.

Hinc data differentia terminorum $= o|\frac{i}{}$, erit numerus terminorum $= o|\frac{1}{i}$, & per 16 Logarithmot. ſumma eorundem terminorum $= 0,005$, & ſumma quadratorum $= 0,000333$. At data differentia terminorum $= o|\frac{10}{}$; numerus terminorum eſt $= 0,01$, & ſumma eorundem $= 0,000005$, & ſumma quadratorum $= 0,00000333$, &c.

Nota. Prop. IV. Logarithmot. Signa ſpeciebus intercedentia debebant eſſe alternatim affirmata & negata: atque ubicunque, Lector offenderit *infinitiſſimam*, legat *infiniteſimam*.

Errata.
